Summary

Python Backend Developer with hands-on experience designing and deploying **REST APIs**, **multi-role web systems**, and **machine learning pipelines** using FastAPI, Flask, and PostgreSQL. Delivered a production-ready IT Asset Management System supporting 3 user roles and 3+ modules. Achieved **87% model accuracy** on a real-world hiring prediction dataset and built dashboards analyzing **396M+ data points**. Strong foundation in data analysis, API design, and scalable backend architecture. Passionate about writing clean, maintainable code that solves real business problems.

Education

RNGPIT College, Bardoli

2022 – 2026

Bachelor of Engineering – Computer Science Engineering

CGPA: 7.35 / 10

LMP and MCZ Higher Secondary School

2020 – 2022

Higher Secondary Certificate (HSC) – Class 12

Percentage: 55%

LMP and MCZ Higher Secondary School

Secondary School Certificate (SSC) – Class 10

percentage: 60%

Experience

Backend Developer

January 2026 – May 2026

IT Asset Management System | Python, FastAPI, PostgreSQL, JWT, GitHub

Bardoli, Gujarat, India

- Architected and delivered a **production-ready** multi-role IT Asset Management System with **4 core modules** – inventory tracking, client asset management, ticket lifecycle management, and analytics dashboards – consolidating previously manual workflows into a single platform.
- Engineered **Role-Based Access Control (RBAC)** for **3 user roles** (Admin, Support Engineer, Employee), implementing granular permission boundaries and role-specific workflows that reduced unauthorized access risk.
- Built and documented **20+ RESTful API endpoints** with FastAPI and PostgreSQL, incorporating **JWT authentication**, input validation, and error handling to meet production security standards.
- Maintained full project lifecycle on **GitHub** using structured branching, code reviews, and versioned releases, ensuring clean and reproducible deployments.

Backend Developer – AI Mental Health Chatbot

April 2026 – May 2026

MindBridge | Python, FastAPI, MongoDB, PyTorch, HuggingFace Transformers, WebSockets

Bardoli, Gujarat, India

- Architected the full backend of an **Android-based AI mental health application** using FastAPI, supporting **2 user roles** (Patient and Doctor) with role-specific access flows and session management.
- Designed a **MongoDB schema** to persistently store user profiles, chat histories, active sessions, and escalation statuses, enabling reliable state management across concurrent real-time conversations.
- Integrated **PyTorch** and **HuggingFace Transformers** to locally deploy the **SamLowe/roberta-base-go_emotions** model, enabling **28-label real-time sentiment analysis** and emotional state detection per message.
- Built a real-time messaging pipeline using **WebSockets (ConnectionManager)** to handle bidirectional communication between the mobile app, AI inference engine, and live doctors with sub-second latency.
- Engineered an automated **crisis escalation protocol** that detects high-risk keywords (e.g., “suicide”, “self-harm”), halts AI responses, and instantly redirects the patient to a human counselor’s live dashboard.
- Implemented a **35-minute global inactivity watchdog** to auto-terminate abandoned escalated sessions, freeing provider queues and ensuring efficient allocation of counselor availability.

Projects

Social Media Sentiment & Engagement Dashboard | Power BI

September 2025

- Designed and published an interactive Power BI dashboard processing **500+ posts** and **396M total engagements**, surfacing sentiment trends, platform-level performance, and virality scoring (avg: 5.07) to support data-driven content decisions.
- Classified engagement data into **3 sentiment categories** (positive, neutral, negative) across multiple social platforms, enabling cross-platform comparison with drill-down capability.

Hiring Outcome Prediction System | Python, Scikit-learn, Flask

June 2025

- Developed a supervised classification model to predict candidate hiring outcomes, achieving **87% accuracy** on a real-world dataset through systematic data preprocessing, feature selection, and hyperparameter tuning using Scikit-learn.

- Deployed the trained model as a **Flask web application**, enabling real-time prediction via a browser interface and reducing manual screening effort for end users.

NYAY BOT – Legal Guidance Chatbot | *SAP Conversational AI, Telegram*

April 2024

- Built and deployed a conversational AI chatbot on **Telegram** to deliver accessible legal guidance for Indian citizens, covering multiple categories of judicial queries and reducing dependency on paid legal intermediaries.
- Designed dialogue flows using **SAP Conversational AI**, improving query resolution accuracy and promoting transparency in legal processes for underserved communities.

Technical Skills

Languages: Python, JavaScript, SQL, HTML, CSS

Backend Frameworks: FastAPI, Flask

Databases: PostgreSQL, MySQL, MongoDB

Data & Machine Learning: Scikit-learn, PyTorch, TensorFlow, HuggingFace Transformers, Pandas, NumPy, Matplotlib

Tools & Platforms: Git, GitHub, Power BI, Postman

Concepts: REST API Design, RBAC, JWT Authentication, Real-time Communication, WebSockets, OOP, DBMS, Feature Engineering, Supervised Learning, Unsupervised Learning, CNNs

Certifications

Data Analysis and Visualization Foundations <i>IBM Cognitive Class</i>	January 2025
ChatGPT + Excel: AI Enhanced Data Analysis & Insight <i>Coursera</i>	January 2025
SAP Foundation Course on Python Programming <i>SAP</i>	November 2024
Python Programming, Data Analysis, AI & SAP Chatbot Development <i>edunet</i>	October 2023
